Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Team ID	PNT2022TMID44437
Project Name	Smart Farmer-IOT Enabled Smart Farming Applicaion

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Log in to system	Check Credentials check Roles of Access
FR-4	Manage Modules	Manage System Admins Manage Roles of User Manage User permission
FR-5	Check Whether details	Temperature details Humidity details
FR-6	Log out	Exit

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	Usability includes easy leam ability,efficiency in use,remember ability,lack of errors in operation and subjective pleasure.
NFR-2	**Security**	Sensitive and private data must be protected from their production until the decision-making and storage stages.
NFR-3	**Reliability**	The shared protection achieves a better trade-off between costs and reliability. The model uses dedicated and shared protection schemes to a void farm service outages.
NFR-4	**Performance**	The idea of implementing integrated sensors with sensing soil and environmental or ambient parameters in farming will be more efficiency for overall monitoring.
NFR-5	**Availability**	Automatic adjustment of farming equipment made possible by linking information like crops/weather and equipment o auto-adjust temperature,humidity,etc.

NFR-6	**Scalability**	Scalability is a major concern for IOT platforms.It has shown that different architecture choices of IOT platforms affect system scalability and that automatic real time decision-making is feasible in an environmental composed of dozens of thousands.
