

Solution Architecture

TEAM ID:	PNT2022TMID44437
PROJECT TITLE:	Smart farmer - IOT Enabled smart farming Application
MAXIMUM MARKS:	4 Marks

- ❖ Arduino UNO is used as a programming tool to wire the hardware, software, and APIs, the MQTT protocol is followed for communication.
- ❖ The different soil parameters (temperature, humidity, soil moisture) are sensed using different sensors, and the obtained value is stored in the IBM Cloud.
- ❖ Node red is used as a programming tool to write the hardware, software, and APIs, the MQTT protocol is followed for communication.
- ❖ All the collected data are provided to the user through a mobile application that was developed using the MIT app inventor.

- ❖ The user cloud make a decision through an app,whether to water the crop or not depending upon the sensor values.
- ❖ By using they can remotely operate the motor switch off.
